Exercise 1

Let $X = (x_1, x_2, \dots, x_n)$

$$x_i \sim \text{Pois}(\lambda) \quad \lambda \sim \Gamma(\alpha, \beta)$$

We have that:

$$\begin{aligned} P(\lambda \mid X) &= \frac{P(X \mid \lambda)P(\lambda)}{P(X)} \\ &\propto P(X \mid \lambda)P(\lambda) \\ &\propto \lambda^{n\bar{x}} e^{-n\lambda} \lambda^{\alpha-1} e^{-\beta\lambda} \\ &= \lambda^{n\bar{x}+\alpha-1} e^{-(n+\beta)\lambda} \end{aligned}$$

Therefore, $P(\lambda \mid X) \sim \Gamma(n\bar{x} + \alpha, \beta + n)$ and the Gamma distribution is conjugate to the Poisson distribution.

Exercise 2

Let $s = (s_1, s_2, \dots, s_n)$, $s' = (s'_1, s'_2, \dots, s'_n)$ and $s_{-i} = (s_1, \dots, s_{i-1}, s_{i+1}, \dots, s_n)$
Detailed balance equation: $\pi(s)P(s, s') = \pi(s')P(s', s)$

w.l.g consider an update for s_1

Case 1: $s_{-1} \neq s'_{-1}$

$$\pi(s)P(s, s') = \pi(s')P(s', s) = 0$$

Case 2: $s_{-1} = s'_{-1}$

$$\begin{aligned}\pi(s)P(s, s') &= \pi(s)P(s'_1 \mid s'_{-1}) \\ &= \pi(s) \frac{\pi(s')}{\sum_z \pi(z, s'_{-1})} \\ &= \pi(s') \frac{\pi(s)}{\sum_z \pi(z, s_{-1})} \\ &= \pi(s')P(s_1 \mid s_{-1}) \\ &= \pi(s')P(s', s)\end{aligned}$$

Consider the move from s to s' . The acceptance probability for MH will be

$$\frac{\pi(s')P(s', s)}{\pi(s)P(s, s')}$$

We have that

$$\begin{aligned}\frac{P(s', s)}{P(s, s')} &= \frac{\frac{\pi(s)}{\sum_z \pi(z, s_{-1})}}{\frac{\pi(s')}{\sum_z \pi(z, s'_{-1})}} \\ &= \frac{\pi(s)}{\pi(s')}\end{aligned}$$

So

$$\frac{\pi(s')P(s', s)}{\pi(s)P(s, s')} = \frac{\pi(s')\pi(s)}{\pi(s)\pi(s')} = 1$$

Exercise 3

MH within Gibbs on blocks w and \hat{t} :

w block

Let our proposal distribution $q(w, w') \sim N(w, I)$. We also have that,

$$\begin{aligned}\pi(w) &\propto p(t, x, \sigma^2, w, \alpha) \\ &= \prod_{n=1}^N \frac{1}{\sigma \sqrt{2\pi}} e^{-\frac{1}{2}(\frac{t_n - w^T x_n}{\sigma})^2} \prod_{d=1}^D \frac{1}{\sqrt{2\pi\alpha}} e^{-\frac{1}{2}(\frac{w_d}{\sqrt{\alpha}})^2}\end{aligned}$$

So the update probability is,

$$\begin{aligned}r &= \frac{\pi(w')q(w', w)}{\pi(w)q(w, w')} \\ &= \frac{\prod_{n=1}^N \frac{1}{\sigma \sqrt{2\pi}} e^{-\frac{1}{2}(\frac{t_n - w'^T x_n}{\sigma})^2} \prod_{d=1}^D \frac{1}{\sqrt{2\pi\alpha}} e^{-\frac{1}{2}(\frac{w'_d}{\sqrt{\alpha}})^2} q(w', w)}{\prod_{n=1}^N \frac{1}{\sigma \sqrt{2\pi}} e^{-\frac{1}{2}(\frac{t_n - w^T x_n}{\sigma})^2} \prod_{d=1}^D \frac{1}{\sqrt{2\pi\alpha}} e^{-\frac{1}{2}(\frac{w_d}{\sqrt{\alpha}})^2} q(w, w')} \\ &\propto e^{-\frac{1}{2} \sum_{n=1}^N (\frac{t_n - w'^T x_n}{\sigma})^2 - (\frac{t_n - w^T x_n}{\sigma})^2} e^{-\frac{1}{2} \sum_{d=1}^D (\frac{w'_d}{\sqrt{\alpha}})^2 - (\frac{w_d}{\sqrt{\alpha}})^2}\end{aligned}$$
